

Specification Statement to Accompany Sherri Marie Carr's Utility Patent Application

*Abstract*

*The technical disclosure of the invention would be determined by the applicable car companies / designers as they incorporate this idea into their designs for new car prototypes or for revamping current cars they have on the market. It would also be possible to market this product separately through local stores as an item you could use in older version cars made without this mechanism.*

*Things that are new in the art applicable to the invention: technology has grown leaps and bounds (I.e. the north star system). Following suit, it is feasible, relatively simple, and would benefit individuals driving, producing, and servicing cars. Among other things it would benefit our economy.*

*This would have the potential of being patented in various countries according to their manufacturing and governing standards.*
